About Me

Computer Science graduate (GPA 3.85) currently working as a Software Engineer, building a B2B platform using Laravel and modern web technologies. I previously developed an internal AI knowledge system using RAG pipelines, vector databases, and automated document ingestion. I enjoy solving real-world problems through clean engineering, scalable backend design, and data-driven thinking. I'm continuously expanding my expertise in data science, backend development, and intelligent systems.

Education

Universitas Bunda Mulia (2021-2025)

Active student majoring in Informatics - GPA 3.85

Relevant Subject : Artificial Intelligence, Data Analytics, Web and Mobile Programming

SMAN 95 Jakarta (2018-2021)

Science Program – GPA 87.07

Work Experience

Full-Time

PT. Digital Asia Utama - Jakarta

Software Engineer (July 2025 – Until now)

AI Knowledge System (Initial Assigned Project)

- Developed a sophisticated AI chatbot from the ground up, implementing a full Retrieval-Augmented Generation (RAG) pipeline using Python, Haystack 2.x, and the OpenAI API.
- Engineered an advanced data ingestion pipeline to process and structure diverse, unstructured documents (PDFs, web-crawled content) into a queryable knowledge base using PostgreSQL and pgvector. Architected and built the complete backend service as a RESTful API using FastAPI, including planning for Docker containerization.

B2B Platform Development (Current Priority Project)

- lead development of a new B2B platform using Laravel, focusing on core features, API development, authentication, and fullstack implementation.
- Designing scalable architecture and reusable components to support enterprise clients, collaborating with product and engineering teams to deliver modules, refine system logic, and ensure long-term maintainability.

Intern

PT. Mitra Indo Maju - Jakarta

IT Support Intern (August 2024 – Desember 2024)

- Supported IT operations and device troubleshooting for over 150 users.
- Represented the company in seminars and meetings organized by partner companies.
- Successfully contributed to the migration project, transitioning the company's ecosystem from Google Workspace to Microsoft 365.

Part-Time

Universitas Bunda Mulia - Jakarta

Student Tutor (Januari 2025 – June 2025)

- Developed well-structured and curriculum-aligned learning materials to support student understanding in the Data Structures and Algorithms course.
- Guided and managed over 70 students in teaching sessions, ensuring deep conceptual understanding through interactive learning, concept discussions, and case-based examples.

Projects

Migration Project: Google Workspace to Microsoft 365 *(August 2024 – Desember 2024)*

- Collaborated with team to migrate email, chat, and document management systems from Google Workspace to Microsoft 365.
- Managed the setup and ensuring proper integration for seamless user access.
- Provided user training and support throughout the migration process, minimizing downtime and ensuring a smooth transition.

Library Apps Project *(January 2024)*

Web and Mobile Programming

- Leading discussions to determine the theme of the app to be created based on the guidelines provided by the course instructor, which include CRUD functionality.
- Leading discussions to determine the style and animation prototype in Figma, which will be implemented into the app.
- Programming part of one menu by implementing CRUD functionality within it.

Rock Paper Scissors Project *(November 2023)*

Dicoding X IDCamp Challenge 2023

- Created code to run a machine learning program and process a dataset of rock-paper-scissors images
- Successfully generated code to predict rock-paper-scissors images based on user input with an accuracy rate of up to 95% over 25 epochs

Bike Share Project *(November 2023)*

Dicoding X IDCamp Challenge 2023

- Created code to display data for analysis regarding bike rentals
- The code successfully displayed rental data based on daily metrics, changing weather conditions, and rental growth over the last 2 years
- Deployed the code to Streamlit, resulting in graduation from the data analysis class on Dicoding
- Successfully performed data analysis based on the results of the existing code i made.

Skills & Competencies

Hard Skills

- Python
- HTML, CSS, PHP
- SQL
- Excel

Soft Skills

- Detail-oriented
- Problem-solving
- Team coordination

Certifications

- Dicoding Bangun Negeri for University (2023)
- Dicoding X IDCamp Challenge from Indosat Ooredoo (2023)
- CERTIFIED INTERNATIONAL SPECIALIST DATA ENGINEERING (2025)
